

Abstract of the Disclosure

A hinge provides an adjustable engagement with a wood frame or door, for example. A wood engaging member has internal threads to receive a bolt therein.

5 The bolt secures a hinge to the wood engaging member. An adjustment member is threadably engaged with the body of the hinge, and receives the bolt therethrough, whereby adjustment of the hinge relative to the door or frame maybe had, while also enabling complete removal
10 of the hinge from the door or frame and re-attachment thereof, while leaving the wood engaging member in place.
